

Файловый менеджер с функцией автоматического распределения файлов

1. Устанавливаем программу

```
anton@anton-pc ~$ sudo pacman -S tars
resolving dependencies...
looking for conflicting packages...

Packages (2) openssl-1.0-1.0.2-k3  tars
Total Installed Size: 6.88 MiB

:: Proceed with installation? [Y/n] Y
(2/2) checking keys in keyring [#####] 100%
(2/2) checking package integrity [#####] 100%
(2/2) loading package files [#####] 100%
(2/2) checking for file conflicts [#####] 100%
```

2. Настраиваем программу под свою рабочую машину

```
anton@anton-pc ~]$ tars create_setting --help
usage: TARS create_setting [-h] -k KEY -v VALUE

optional arguments:
  -h, --help            show this help message and exit
  -k KEY, --key KEY      setting key
  -v VALUE, --value VALUE
                        setting value

anton@anton-pc ~]$
```

3. Задаём правила распределения файлов

```

```

4. Забываем про то что она существует и наслаждаемся результатом

Преимущества программы:

1. Экономия времени пользователя.
2. Быстрота портирования на другие платформы.
3. Удобство использования на нескольких ПК.
4. Расширяемость.

Недостатки программы:

1. Необходимость тратить много времени на первоначальную настройку программы.
2. Необходимость вручную откатывать изменения, сделанные программой, в случае ошибки.
